

ARSENOMETER®

Portable Arsenic Testing Kit

The Trace2o Arsenometer is a fully portable kit that allows analysis of a water sample on site, detecting levels as low as 5ppb of arsenic. The lightweight, waterproof unit is capable of speciation between Arsenic (III) and Arsenic (V) within 10 minutes without the use of prohibited substances such as mercuric bromide, making the process safer and faster for the user. The tests produce no plastic waste that can harm the environment and the kit comes complete with all reagents required for 200 tests.
